

Northwind Logistics Group

Annual Report 2025 — Demo document for Markdown testing

This is a fictional document generated for demonstration purposes. In North America, the division consolidated its route optimisation programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its last-mile delivery programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division improved its demand forecasting programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division expanded its supplier onboarding programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Chapter 1: Northern Europe Operations

1.1 Last-Mile Delivery

In East Asia, the division improved its demand forecasting programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division consolidated its customs digitisation programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division reduced its customs digitisation programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division expanded its supplier onboarding programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division expanded its demand forecasting programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division expanded its route optimisation programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division modernised its workforce training programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: consolidated route optimisation by 16%.
- Key result: modernised route optimisation by 11%.
- Key result: stabilised fleet electrification by 24%.
- Key result: stabilised last-mile delivery by 20%.

In Oceania, the division restructured its cold-chain capacity programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division expanded its cold-chain capacity programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division restructured its supplier onboarding programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division improved its returns processing programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division restructured its demand forecasting programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	424	317	2,168	88.8
Q2	167	147	2,241	95.7
Q3	153	94	1,568	95.1
Q4	468	396	1,465	95.9

1.2 Route Optimisation

In Oceania, the division restructured its warehouse automation programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division modernised its workforce training programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division reduced its customs digitisation programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its supplier onboarding programme, which contributed to a 8% change in operating

efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division consolidated its fleet electrification programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division consolidated its cold-chain capacity programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division restructured its cold-chain capacity programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: stabilised fleet electrification by 4%.
- Key result: reduced fleet electrification by 9%.
- Key result: stabilised warehouse automation by 17%.
- Key result: reduced cold-chain capacity by 11%.

In North America, the division consolidated its warehouse automation programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its route optimisation programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division modernised its workforce training programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division consolidated its supplier onboarding programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division consolidated its last-mile delivery programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	217	134	1,155	92.8
Q2	176	123	515	89.1
Q3	410	264	715	98.4
Q4	434	263	1,151	94.8

1.3 Fleet Electrification

In South Asia, the division restructured its cold-chain capacity programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division modernised its last-mile delivery programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division accelerated its returns processing programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its fleet electrification programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division improved its returns processing programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its demand forecasting programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its warehouse automation programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: restructured fleet electrification by 13%.
- Key result: stabilised demand forecasting by 19%.
- Key result: restructured customs digitisation by 21%.

- Key result: stabilised customs digitisation by 28%.

In Latin America, the division stabilised its supplier onboarding programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division improved its returns processing programme, which contributed to a 4% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division accelerated its cold-chain capacity programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its workforce training programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division stabilised its route optimisation programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	236	174	1,683	90.2
Q2	439	393	307	93.3
Q3	454	319	647	97.2
Q4	181	158	1,116	93.3

1.4 Fleet Electrification

In South Asia, the division expanded its supplier onboarding programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division expanded its returns processing programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division improved its fleet electrification programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division reduced its workforce training programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division reduced its route optimisation programme, which contributed to a 4% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division reduced its warehouse automation programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division improved its customs digitisation programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: stabilised cold-chain capacity by 18%.
- Key result: stabilised workforce training by 12%.
- Key result: accelerated demand forecasting by 15%.
- Key result: reduced warehouse automation by 25%.

In Oceania, the division consolidated its route optimisation programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division improved its fleet electrification programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division reduced its fleet electrification programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division expanded its fleet electrification programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its warehouse automation programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	406	250	1,083	91.0
Q2	170	127	414	96.4
Q3	152	111	2,370	94.7
Q4	222	179	2,152	93.6

Chapter 2: Southern Europe Operations

2.1 Returns Processing

In Latin America, the division accelerated its demand forecasting programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division reduced its customs digitisation programme, which contributed to a 29% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its last-mile delivery programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division consolidated its last-mile delivery programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its customs digitisation programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division accelerated its route optimisation programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its returns processing programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: modernised fleet electrification by 23%.
- Key result: stabilised fleet electrification by 24%.
- Key result: consolidated demand forecasting by 14%.
- Key result: restructured supplier onboarding by 8%.

In South Asia, the division expanded its route optimisation programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its warehouse automation programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division restructured its warehouse automation programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its workforce training programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division expanded its customs digitisation programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	259	158	1,043	91.0
Q2	186	157	1,359	92.5
Q3	394	345	2,325	95.7
Q4	165	112	1,050	92.7

2.2 Last-Mile Delivery

In Northern Europe, the division expanded its cold-chain capacity programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its last-mile delivery programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division improved its last-mile delivery programme, which contributed to a 24% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division accelerated its

demand forecasting programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its warehouse automation programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division reduced its cold-chain capacity programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its cold-chain capacity programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: modernised demand forecasting by 23%.
- Key result: reduced cold-chain capacity by 13%.
- Key result: improved cold-chain capacity by 3%.
- Key result: improved warehouse automation by 25%.

In Latin America, the division modernised its demand forecasting programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division consolidated its returns processing programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division accelerated its demand forecasting programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its customs digitisation programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division improved its supplier onboarding programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	127	78	1,346	92.7
Q2	148	92	1,860	97.6
Q3	463	412	1,292	95.6
Q4	143	105	945	91.0

2.3 Warehouse Automation

In South Asia, the division restructured its cold-chain capacity programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division improved its route optimisation programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its customs digitisation programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division expanded its route optimisation programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division stabilised its cold-chain capacity programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division accelerated its warehouse automation programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division improved its fleet electrification programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: improved cold-chain capacity by 11%.
- Key result: stabilised last-mile delivery by 20%.

- Key result: reduced workforce training by 14%.
- Key result: restructured returns processing by 6%.

In North America, the division improved its cold-chain capacity programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division improved its supplier onboarding programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its last-mile delivery programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division consolidated its route optimisation programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its demand forecasting programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	468	315	1,380	88.0
Q2	155	127	2,360	97.9
Q3	167	133	570	96.2
Q4	362	244	604	97.3

2.4 Customs Digitisation

In Latin America, the division modernised its customs digitisation programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division modernised its supplier onboarding programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its warehouse automation programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division accelerated its route optimisation programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division improved its warehouse automation programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division stabilised its cold-chain capacity programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division modernised its cold-chain capacity programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: modernised last-mile delivery by 30%.
- Key result: stabilised cold-chain capacity by 4%.
- Key result: modernised warehouse automation by 11%.
- Key result: modernised last-mile delivery by 28%.

In Oceania, the division accelerated its demand forecasting programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its customs digitisation programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division restructured its fleet electrification programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its workforce training programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division

modernised its customs digitisation programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	132	85	2,313	95.5
Q2	327	225	876	92.6
Q3	312	216	1,657	88.0
Q4	293	249	791	98.3

Chapter 3: North America Operations

3.1 Customs Digitisation

In Middle East, the division accelerated its warehouse automation programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division consolidated its last-mile delivery programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division accelerated its route optimisation programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division improved its cold-chain capacity programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division accelerated its fleet electrification programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its demand forecasting programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division consolidated its supplier onboarding programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: stabilised last-mile delivery by 3%.
- Key result: consolidated returns processing by 21%.
- Key result: reduced cold-chain capacity by 17%.
- Key result: improved demand forecasting by 6%.

In Oceania, the division consolidated its fleet electrification programme, which contributed to a 24% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division accelerated its cold-chain capacity programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division accelerated its supplier onboarding programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division expanded its demand forecasting programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division stabilised its fleet electrification programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	374	286	2,155	98.0
Q2	350	254	1,088	90.7
Q3	209	146	673	91.5
Q4	308	208	1,127	97.8

3.2 Supplier Onboarding

In East Asia, the division stabilised its supplier onboarding programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division improved its cold-chain capacity programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its cold-chain capacity programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its

demand forecasting programme, which contributed to a 20% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division consolidated its customs digitisation programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division improved its supplier onboarding programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its warehouse automation programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: improved last-mile delivery by 14%.
- Key result: modernised returns processing by 9%.
- Key result: expanded customs digitisation by 6%.
- Key result: reduced demand forecasting by 23%.

In Oceania, the division expanded its last-mile delivery programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division reduced its warehouse automation programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division accelerated its workforce training programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division expanded its cold-chain capacity programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its last-mile delivery programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	253	168	304	88.1
Q2	274	246	1,441	98.5
Q3	450	383	1,292	93.2
Q4	240	183	419	98.6

3.3 Cold-Chain Capacity

In Northern Europe, the division stabilised its warehouse automation programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division accelerated its supplier onboarding programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its supplier onboarding programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division consolidated its warehouse automation programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division improved its supplier onboarding programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division stabilised its demand forecasting programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its customs digitisation programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: modernised customs digitisation by 10%.
- Key result: accelerated last-mile delivery by 21%.
- Key result: modernised workforce training by 7%.

- Key result: stabilised returns processing by 15%.

In North America, the division consolidated its warehouse automation programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division reduced its customs digitisation programme, which contributed to a 29% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division reduced its warehouse automation programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division expanded its returns processing programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its fleet electrification programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	454	399	2,215	88.4
Q2	460	376	1,831	98.8
Q3	346	225	311	88.9
Q4	161	113	806	94.2

3.4 Customs Digitisation

In South Asia, the division accelerated its supplier onboarding programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division modernised its last-mile delivery programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division stabilised its route optimisation programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division improved its route optimisation programme, which contributed to a 29% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division improved its customs digitisation programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division expanded its warehouse automation programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its cold-chain capacity programme, which contributed to a 24% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: restructured cold-chain capacity by 12%.
- Key result: improved cold-chain capacity by 25%.
- Key result: restructured cold-chain capacity by 11%.
- Key result: improved workforce training by 27%.

In Northern Europe, the division stabilised its last-mile delivery programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division consolidated its returns processing programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division reduced its supplier onboarding programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division accelerated its fleet electrification programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division restructured its workforce training programme, which contributed to a 23%

change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	355	251	623	93.6
Q2	320	264	1,312	92.5
Q3	452	275	1,634	89.8
Q4	338	292	595	90.9

Chapter 4: Latin America Operations

4.1 Last-Mile Delivery

In Southern Europe, the division consolidated its customs digitisation programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division stabilised its returns processing programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division stabilised its supplier onboarding programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division accelerated its last-mile delivery programme, which contributed to a 20% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division restructured its workforce training programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division modernised its cold-chain capacity programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division stabilised its fleet electrification programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: accelerated workforce training by 8%.
- Key result: restructured last-mile delivery by 14%.
- Key result: accelerated customs digitisation by 18%.
- Key result: stabilised last-mile delivery by 22%.

In Northern Europe, the division expanded its returns processing programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division modernised its returns processing programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its warehouse automation programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division stabilised its warehouse automation programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division modernised its route optimisation programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	460	406	733	95.0
Q2	437	308	453	92.1
Q3	192	117	1,344	88.4
Q4	453	396	346	97.0

4.2 Supplier Onboarding

In North America, the division accelerated its route optimisation programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division modernised its customs digitisation programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division consolidated its returns processing programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division

expanded its supplier onboarding programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division consolidated its supplier onboarding programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division improved its cold-chain capacity programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division consolidated its workforce training programme, which contributed to a 29% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: improved route optimisation by 22%.
- Key result: stabilised supplier onboarding by 25%.
- Key result: consolidated customs digitisation by 2%.
- Key result: consolidated fleet electrification by 15%.

In Southern Europe, the division consolidated its last-mile delivery programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division reduced its returns processing programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division consolidated its warehouse automation programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its workforce training programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division reduced its route optimisation programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	207	181	745	92.2
Q2	221	152	478	98.7
Q3	367	254	1,888	88.9
Q4	437	352	956	95.0

4.3 Customs Digitisation

In East Asia, the division stabilised its workforce training programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division improved its fleet electrification programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division consolidated its demand forecasting programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division stabilised its last-mile delivery programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division restructured its warehouse automation programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division accelerated its supplier onboarding programme, which contributed to a 29% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division consolidated its cold-chain capacity programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: restructured returns processing by 18%.
- Key result: modernised fleet electrification by 2%.
- Key result: improved workforce training by 17%.

- Key result: modernised customs digitisation by 16%.

In Oceania, the division reduced its workforce training programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division expanded its supplier onboarding programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division restructured its route optimisation programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its returns processing programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division expanded its last-mile delivery programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	378	328	857	88.3
Q2	153	137	748	90.1
Q3	371	254	976	95.5
Q4	233	144	1,737	94.7

4.4 Cold-Chain Capacity

In South Asia, the division accelerated its fleet electrification programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division modernised its fleet electrification programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its workforce training programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division stabilised its route optimisation programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division accelerated its supplier onboarding programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division accelerated its supplier onboarding programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division restructured its demand forecasting programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: expanded cold-chain capacity by 19%.
- Key result: consolidated route optimisation by 10%.
- Key result: consolidated route optimisation by 20%.
- Key result: reduced route optimisation by 12%.

In Oceania, the division stabilised its last-mile delivery programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division accelerated its workforce training programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division restructured its cold-chain capacity programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its warehouse automation programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division consolidated its workforce training programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	306	265	840	93.4
Q2	433	344	391	88.6
Q3	410	289	735	93.8
Q4	393	262	1,533	94.5

Chapter 5: Middle East Operations

5.1 Customs Digitisation

In Oceania, the division reduced its route optimisation programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its warehouse automation programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division reduced its last-mile delivery programme, which contributed to a 20% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division improved its supplier onboarding programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its demand forecasting programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its returns processing programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its warehouse automation programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: reduced customs digitisation by 7%.
- Key result: improved last-mile delivery by 2%.
- Key result: stabilised fleet electrification by 15%.
- Key result: stabilised demand forecasting by 21%.

In East Asia, the division reduced its demand forecasting programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division accelerated its cold-chain capacity programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division consolidated its returns processing programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division modernised its returns processing programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division accelerated its customs digitisation programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	449	274	1,674	97.8
Q2	475	419	1,378	95.8
Q3	256	202	2,086	95.5
Q4	387	345	1,510	95.1

5.2 Customs Digitisation

In Northern Europe, the division reduced its last-mile delivery programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its customs digitisation programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division restructured its customs digitisation programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division modernised its

supplier onboarding programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division consolidated its warehouse automation programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its workforce training programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division reduced its workforce training programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: improved warehouse automation by 5%.
- Key result: expanded workforce training by 7%.
- Key result: restructured fleet electrification by 24%.
- Key result: improved warehouse automation by 3%.

In Northern Europe, the division expanded its fleet electrification programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its last-mile delivery programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division expanded its last-mile delivery programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its customs digitisation programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division accelerated its warehouse automation programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	171	109	1,139	91.2
Q2	292	212	385	91.9
Q3	264	162	1,807	98.0
Q4	428	321	1,478	94.8

5.3 Warehouse Automation

In Northern Europe, the division consolidated its supplier onboarding programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its last-mile delivery programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its demand forecasting programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division improved its fleet electrification programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division improved its customs digitisation programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division expanded its route optimisation programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division restructured its fleet electrification programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: accelerated workforce training by 7%.
- Key result: accelerated customs digitisation by 24%.

- Key result: stabilised returns processing by 7%.
- Key result: expanded last-mile delivery by 17%.

In Southern Europe, the division restructured its demand forecasting programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division consolidated its last-mile delivery programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division restructured its supplier onboarding programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division consolidated its cold-chain capacity programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division consolidated its demand forecasting programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	355	226	438	91.8
Q2	287	217	2,144	95.3
Q3	285	185	2,097	95.6
Q4	251	194	816	91.7

5.4 Customs Digitisation

In Latin America, the division accelerated its demand forecasting programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division reduced its workforce training programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its route optimisation programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division accelerated its route optimisation programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division stabilised its fleet electrification programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division accelerated its fleet electrification programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its supplier onboarding programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: expanded cold-chain capacity by 8%.
- Key result: consolidated returns processing by 3%.
- Key result: improved supplier onboarding by 29%.
- Key result: consolidated customs digitisation by 18%.

In Oceania, the division improved its cold-chain capacity programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division improved its cold-chain capacity programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division stabilised its supplier onboarding programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division modernised its fleet electrification programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle

East, the division expanded its route optimisation programme, which contributed to a 29% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	244	203	940	90.8
Q2	336	250	380	94.8
Q3	329	248	1,049	97.8
Q4	287	239	1,892	97.2

Chapter 6: South Asia Operations

6.1 Last-Mile Delivery

In Middle East, the division stabilised its warehouse automation programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division expanded its customs digitisation programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division modernised its demand forecasting programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division restructured its warehouse automation programme, which contributed to a 29% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its returns processing programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its demand forecasting programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division consolidated its cold-chain capacity programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: improved warehouse automation by 4%.
- Key result: consolidated supplier onboarding by 22%.
- Key result: restructured workforce training by 10%.
- Key result: expanded customs digitisation by 11%.

In Latin America, the division consolidated its supplier onboarding programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division reduced its customs digitisation programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division stabilised its customs digitisation programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its route optimisation programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division modernised its demand forecasting programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	237	161	1,840	95.6
Q2	338	271	2,272	88.0
Q3	263	186	1,536	91.5
Q4	368	268	649	95.3

6.2 Route Optimisation

In Middle East, the division consolidated its fleet electrification programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its last-mile delivery programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its route optimisation programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division accelerated its

last-mile delivery programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division stabilised its workforce training programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its returns processing programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division expanded its supplier onboarding programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: accelerated customs digitisation by 17%.
- Key result: stabilised demand forecasting by 4%.
- Key result: modernised last-mile delivery by 19%.
- Key result: expanded cold-chain capacity by 15%.

In North America, the division modernised its customs digitisation programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division modernised its demand forecasting programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division stabilised its fleet electrification programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division reduced its fleet electrification programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division accelerated its returns processing programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	311	226	608	90.0
Q2	304	240	416	88.2
Q3	143	115	1,653	96.9
Q4	168	126	2,285	96.3

6.3 Fleet Electrification

In Latin America, the division consolidated its warehouse automation programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its route optimisation programme, which contributed to a 24% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division accelerated its returns processing programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division accelerated its route optimisation programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division accelerated its warehouse automation programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division restructured its returns processing programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its cold-chain capacity programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: expanded route optimisation by 8%.
- Key result: restructured cold-chain capacity by 6%.

- Key result: expanded warehouse automation by 14%.
- Key result: consolidated demand forecasting by 20%.

In East Asia, the division accelerated its warehouse automation programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division stabilised its warehouse automation programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division consolidated its workforce training programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division stabilised its workforce training programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division expanded its returns processing programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	138	100	712	98.1
Q2	455	274	868	96.7
Q3	407	330	1,537	90.0
Q4	137	95	2,064	94.2

6.4 Workforce Training

In Oceania, the division improved its warehouse automation programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its supplier onboarding programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division reduced its warehouse automation programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division expanded its supplier onboarding programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division improved its customs digitisation programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division expanded its warehouse automation programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division reduced its customs digitisation programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: improved cold-chain capacity by 25%.
- Key result: stabilised returns processing by 25%.
- Key result: reduced warehouse automation by 13%.
- Key result: reduced last-mile delivery by 11%.

In Oceania, the division modernised its demand forecasting programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its warehouse automation programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division consolidated its warehouse automation programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division modernised its cold-chain capacity programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

In South Asia, the division modernised its route optimisation programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	466	302	778	92.0
Q2	450	292	2,011	93.2
Q3	351	310	1,667	91.2
Q4	151	118	1,660	97.6

Chapter 7: East Asia Operations

7.1 Warehouse Automation

In Middle East, the division consolidated its fleet electrification programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division consolidated its supplier onboarding programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division improved its returns processing programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division consolidated its cold-chain capacity programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division accelerated its workforce training programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division accelerated its workforce training programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division expanded its returns processing programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: modernised supplier onboarding by 8%.
- Key result: stabilised cold-chain capacity by 21%.
- Key result: improved supplier onboarding by 16%.
- Key result: stabilised cold-chain capacity by 20%.

In East Asia, the division modernised its warehouse automation programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division expanded its last-mile delivery programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division restructured its supplier onboarding programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division stabilised its demand forecasting programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division reduced its customs digitisation programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	305	235	1,770	92.4
Q2	384	329	1,308	88.5
Q3	372	264	734	92.1
Q4	357	298	939	91.5

7.2 Warehouse Automation

In Middle East, the division improved its route optimisation programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division modernised its warehouse automation programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division consolidated its cold-chain capacity programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division

accelerated its returns processing programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its route optimisation programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its last-mile delivery programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its demand forecasting programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: expanded workforce training by 22%.
- Key result: consolidated last-mile delivery by 24%.
- Key result: expanded cold-chain capacity by 12%.
- Key result: stabilised last-mile delivery by 23%.

In East Asia, the division reduced its demand forecasting programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its fleet electrification programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division accelerated its fleet electrification programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its warehouse automation programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division improved its demand forecasting programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	194	134	323	98.3
Q2	466	384	2,107	96.3
Q3	173	128	1,822	90.8
Q4	183	130	1,855	89.9

7.3 Customs Digitisation

In Northern Europe, the division modernised its fleet electrification programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division stabilised its warehouse automation programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its workforce training programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division improved its last-mile delivery programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division restructured its returns processing programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its returns processing programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division improved its route optimisation programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: modernised demand forecasting by 30%.
- Key result: reduced returns processing by 29%.

- Key result: reduced cold-chain capacity by 15%.
- Key result: consolidated customs digitisation by 6%.

In Middle East, the division accelerated its warehouse automation programme, which contributed to a 24% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division modernised its fleet electrification programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division modernised its route optimisation programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division stabilised its fleet electrification programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its returns processing programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	223	198	2,069	98.9
Q2	242	212	699	92.3
Q3	332	288	535	97.2
Q4	270	173	365	92.9

7.4 Demand Forecasting

In North America, the division modernised its route optimisation programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division reduced its demand forecasting programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division consolidated its supplier onboarding programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division reduced its cold-chain capacity programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its demand forecasting programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division expanded its workforce training programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division stabilised its cold-chain capacity programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: stabilised workforce training by 11%.
- Key result: stabilised warehouse automation by 4%.
- Key result: consolidated warehouse automation by 18%.
- Key result: restructured route optimisation by 11%.

In Southern Europe, the division improved its returns processing programme, which contributed to a 29% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division accelerated its returns processing programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division improved its fleet electrification programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division restructured its route optimisation programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In

Southern Europe, the division expanded its returns processing programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	245	207	1,614	96.6
Q2	315	243	550	91.2
Q3	175	155	2,326	92.9
Q4	133	100	850	88.2

Chapter 8: Oceania Operations

8.1 Last-Mile Delivery

In North America, the division reduced its customs digitisation programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division improved its cold-chain capacity programme, which contributed to a 4% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division accelerated its last-mile delivery programme, which contributed to a 4% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division stabilised its workforce training programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division expanded its last-mile delivery programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its warehouse automation programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its returns processing programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: expanded supplier onboarding by 30%.
- Key result: reduced demand forecasting by 20%.
- Key result: stabilised customs digitisation by 6%.
- Key result: modernised supplier onboarding by 7%.

In East Asia, the division consolidated its warehouse automation programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division improved its warehouse automation programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division stabilised its route optimisation programme, which contributed to a 24% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division consolidated its supplier onboarding programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its warehouse automation programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	247	212	347	92.0
Q2	391	256	1,628	92.8
Q3	378	302	1,223	89.5
Q4	323	269	2,158	95.0

8.2 Warehouse Automation

In Middle East, the division accelerated its warehouse automation programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division accelerated its warehouse automation programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division consolidated its demand forecasting programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle

East, the division expanded its warehouse automation programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division expanded its route optimisation programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its workforce training programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division modernised its workforce training programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: reduced cold-chain capacity by 15%.
- Key result: accelerated cold-chain capacity by 9%.
- Key result: expanded demand forecasting by 11%.
- Key result: modernised workforce training by 24%.

In Latin America, the division consolidated its workforce training programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its demand forecasting programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division modernised its cold-chain capacity programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division restructured its warehouse automation programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division consolidated its customs digitisation programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	300	194	1,277	91.6
Q2	286	213	1,466	97.7
Q3	230	158	389	89.7
Q4	154	120	1,725	92.8

8.3 Warehouse Automation

In East Asia, the division modernised its demand forecasting programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its last-mile delivery programme, which contributed to a 29% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division reduced its route optimisation programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its workforce training programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division consolidated its cold-chain capacity programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division expanded its warehouse automation programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division consolidated its supplier onboarding programme, which contributed to a 20% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: expanded supplier onboarding by 29%.
- Key result: modernised returns processing by 11%.
- Key result: restructured cold-chain capacity by 13%.

- Key result: consolidated demand forecasting by 19%.

In East Asia, the division restructured its workforce training programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its returns processing programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division reduced its fleet electrification programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division stabilised its workforce training programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its route optimisation programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	224	199	343	88.3
Q2	251	193	2,337	91.3
Q3	394	327	2,090	93.7
Q4	384	314	2,061	92.3

8.4 Route Optimisation

In South Asia, the division modernised its warehouse automation programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its last-mile delivery programme, which contributed to a 29% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division reduced its route optimisation programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division consolidated its supplier onboarding programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division expanded its workforce training programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division restructured its route optimisation programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division expanded its cold-chain capacity programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: restructured demand forecasting by 30%.
- Key result: consolidated fleet electrification by 18%.
- Key result: accelerated demand forecasting by 8%.
- Key result: stabilised supplier onboarding by 7%.

In Southern Europe, the division restructured its warehouse automation programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its supplier onboarding programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division accelerated its demand forecasting programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its last-mile delivery programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division accelerated its fleet electrification programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping

service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	383	344	1,113	92.5
Q2	182	117	2,386	89.2
Q3	171	106	2,308	97.1
Q4	433	315	554	95.2

Chapter 9: Sustainability

9.1 Workforce Training

In North America, the division stabilised its route optimisation programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division improved its cold-chain capacity programme, which contributed to a 20% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its last-mile delivery programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division improved its returns processing programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division improved its customs digitisation programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division stabilised its warehouse automation programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division reduced its warehouse automation programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: improved returns processing by 11%.
- Key result: consolidated workforce training by 10%.
- Key result: modernised last-mile delivery by 9%.
- Key result: consolidated workforce training by 9%.

In Middle East, the division consolidated its supplier onboarding programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its warehouse automation programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division consolidated its fleet electrification programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division consolidated its warehouse automation programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its route optimisation programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	317	222	568	98.6
Q2	336	284	1,738	94.1
Q3	318	209	1,461	91.8
Q4	343	209	403	91.8

9.2 Fleet Electrification

In North America, the division expanded its customs digitisation programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division modernised its cold-chain capacity programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division restructured its customs digitisation programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division

consolidated its customs digitisation programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division stabilised its cold-chain capacity programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division accelerated its returns processing programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its workforce training programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: stabilised fleet electrification by 29%.
- Key result: expanded demand forecasting by 4%.
- Key result: accelerated supplier onboarding by 2%.
- Key result: reduced cold-chain capacity by 2%.

In Southern Europe, the division reduced its supplier onboarding programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its route optimisation programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division accelerated its demand forecasting programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its last-mile delivery programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division consolidated its cold-chain capacity programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	302	217	2,202	96.5
Q2	441	378	841	98.3
Q3	210	127	1,739	97.9
Q4	132	105	2,194	90.7

9.3 Supplier Onboarding

In Southern Europe, the division reduced its route optimisation programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its last-mile delivery programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division reduced its supplier onboarding programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division reduced its customs digitisation programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division reduced its warehouse automation programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division accelerated its workforce training programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division improved its workforce training programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: accelerated warehouse automation by 30%.
- Key result: improved customs digitisation by 23%.

- Key result: expanded warehouse automation by 27%.
- Key result: restructured customs digitisation by 26%.

In Southern Europe, the division consolidated its route optimisation programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division accelerated its workforce training programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division consolidated its last-mile delivery programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division improved its route optimisation programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division modernised its supplier onboarding programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	142	125	1,369	89.9
Q2	203	180	1,266	94.0
Q3	247	219	988	91.9
Q4	330	207	1,572	89.5

9.4 Returns Processing

In Latin America, the division stabilised its returns processing programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division reduced its demand forecasting programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division reduced its cold-chain capacity programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division consolidated its route optimisation programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division consolidated its fleet electrification programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division improved its last-mile delivery programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division improved its returns processing programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: accelerated cold-chain capacity by 8%.
- Key result: expanded cold-chain capacity by 16%.
- Key result: expanded fleet electrification by 12%.
- Key result: modernised returns processing by 20%.

In Middle East, the division reduced its route optimisation programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its last-mile delivery programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its returns processing programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division consolidated its last-mile delivery programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division improved its customs digitisation programme, which contributed to a 25% change

in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	166	131	1,329	95.2
Q2	160	102	413	88.3
Q3	322	274	1,513	92.0
Q4	446	337	990	89.1

Chapter 10: Financial Statements

10.1 Cold-Chain Capacity

In South Asia, the division consolidated its workforce training programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its route optimisation programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division accelerated its fleet electrification programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division expanded its warehouse automation programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division modernised its warehouse automation programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division accelerated its returns processing programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its fleet electrification programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: modernised supplier onboarding by 4%.
- Key result: improved returns processing by 17%.
- Key result: stabilised customs digitisation by 25%.
- Key result: restructured warehouse automation by 3%.

In East Asia, the division reduced its workforce training programme, which contributed to a 21% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division consolidated its last-mile delivery programme, which contributed to a 24% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division improved its last-mile delivery programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division accelerated its fleet electrification programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its returns processing programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	163	124	2,186	92.7
Q2	393	342	932	98.7
Q3	431	338	545	96.0
Q4	289	226	1,516	94.2

10.2 Supplier Onboarding

In Oceania, the division reduced its route optimisation programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division stabilised its route optimisation programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division reduced its returns processing programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division restructured its demand forecasting programme, which contributed to a 36% change in operating efficiency

compared with the prior year while keeping service levels within agreed targets. In Oceania, the division consolidated its customs digitisation programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its last-mile delivery programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division stabilised its demand forecasting programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: expanded customs digitisation by 18%.
- Key result: accelerated returns processing by 9%.
- Key result: modernised customs digitisation by 19%.
- Key result: expanded demand forecasting by 20%.

In Southern Europe, the division consolidated its workforce training programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division expanded its returns processing programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division consolidated its last-mile delivery programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division modernised its fleet electrification programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division improved its fleet electrification programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	241	148	470	88.2
Q2	424	375	2,182	91.3
Q3	189	137	659	94.8
Q4	223	171	1,752	89.8

10.3 Route Optimisation

In Middle East, the division expanded its warehouse automation programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its route optimisation programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division expanded its workforce training programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division expanded its demand forecasting programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division restructured its customs digitisation programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division modernised its returns processing programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division expanded its warehouse automation programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: accelerated fleet electrification by 6%.
- Key result: accelerated supplier onboarding by 28%.
- Key result: reduced workforce training by 30%.
- Key result: accelerated demand forecasting by 24%.

In Oceania, the division improved its cold-chain capacity programme, which contributed to a 4% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division modernised its route optimisation programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its returns processing programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its fleet electrification programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division stabilised its returns processing programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	158	111	1,186	91.4
Q2	187	145	478	90.3
Q3	304	248	1,657	94.3
Q4	318	280	1,587	88.1

10.4 Workforce Training

In South Asia, the division stabilised its returns processing programme, which contributed to a 4% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division improved its customs digitisation programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division consolidated its fleet electrification programme, which contributed to a 20% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division restructured its last-mile delivery programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division improved its workforce training programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division consolidated its last-mile delivery programme, which contributed to a 9% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its route optimisation programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: expanded cold-chain capacity by 26%.
- Key result: restructured route optimisation by 18%.
- Key result: stabilised route optimisation by 29%.
- Key result: consolidated route optimisation by 3%.

In South Asia, the division modernised its route optimisation programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division stabilised its route optimisation programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division stabilised its fleet electrification programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its returns processing programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division reduced its workforce training programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	193	133	1,563	90.8
Q2	412	315	1,694	88.8
Q3	217	168	627	94.4
Q4	275	212	2,216	91.9

Chapter 11: Risk Management

11.1 Supplier Onboarding

In Oceania, the division restructured its last-mile delivery programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division improved its cold-chain capacity programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division improved its cold-chain capacity programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its warehouse automation programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its workforce training programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division reduced its customs digitisation programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its last-mile delivery programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: improved customs digitisation by 10%.
- Key result: improved route optimisation by 2%.
- Key result: stabilised route optimisation by 12%.
- Key result: improved returns processing by 14%.

In South Asia, the division reduced its workforce training programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division expanded its supplier onboarding programme, which contributed to a 24% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division accelerated its returns processing programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division restructured its warehouse automation programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division restructured its warehouse automation programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	167	101	1,162	89.6
Q2	166	117	1,781	92.7
Q3	395	317	928	95.2
Q4	428	330	1,242	96.2

11.2 Cold-Chain Capacity

In Northern Europe, the division accelerated its returns processing programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division restructured its returns processing programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division reduced its demand forecasting programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division expanded

its warehouse automation programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division consolidated its fleet electrification programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division expanded its warehouse automation programme, which contributed to a 6% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division reduced its demand forecasting programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: restructured fleet electrification by 30%.
- Key result: reduced fleet electrification by 18%.
- Key result: improved route optimisation by 26%.
- Key result: stabilised returns processing by 29%.

In Latin America, the division restructured its returns processing programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division restructured its returns processing programme, which contributed to a 4% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division expanded its last-mile delivery programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division stabilised its route optimisation programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division stabilised its supplier onboarding programme, which contributed to a 4% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	248	150	2,076	90.7
Q2	301	198	2,043	95.1
Q3	272	234	2,342	90.4
Q4	411	344	2,255	97.5

11.3 Cold-Chain Capacity

In Middle East, the division accelerated its fleet electrification programme, which contributed to a 8% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division modernised its route optimisation programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its fleet electrification programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division stabilised its workforce training programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division reduced its warehouse automation programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division improved its fleet electrification programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division reduced its fleet electrification programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: reduced demand forecasting by 25%.
- Key result: restructured last-mile delivery by 26%.
- Key result: reduced returns processing by 23%.

- Key result: consolidated last-mile delivery by 15%.

In East Asia, the division restructured its route optimisation programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division stabilised its workforce training programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division stabilised its warehouse automation programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its last-mile delivery programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division expanded its last-mile delivery programme, which contributed to a 34% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	189	143	310	90.0
Q2	470	358	2,350	98.9
Q3	391	276	2,332	98.5
Q4	159	112	1,181	97.4

11.4 Customs Digitisation

In Middle East, the division reduced its last-mile delivery programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division expanded its cold-chain capacity programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division consolidated its customs digitisation programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division improved its route optimisation programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division accelerated its warehouse automation programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division accelerated its route optimisation programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division consolidated its supplier onboarding programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: reduced supplier onboarding by 26%.
- Key result: consolidated supplier onboarding by 27%.
- Key result: reduced warehouse automation by 9%.
- Key result: accelerated workforce training by 25%.

In Latin America, the division stabilised its supplier onboarding programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division improved its last-mile delivery programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its demand forecasting programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division improved its route optimisation programme, which contributed to a 33% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division consolidated its returns processing programme, which contributed to a 18% change in operating

efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	442	370	1,851	91.9
Q2	152	109	1,391	94.7
Q3	466	395	594	94.9
Q4	398	318	1,385	90.9

Chapter 12: Outlook

12.1 Returns Processing

In Oceania, the division stabilised its route optimisation programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its last-mile delivery programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division stabilised its fleet electrification programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division reduced its fleet electrification programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division restructured its route optimisation programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division reduced its last-mile delivery programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its supplier onboarding programme, which contributed to a 25% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: accelerated returns processing by 23%.
- Key result: expanded cold-chain capacity by 14%.
- Key result: accelerated returns processing by 24%.
- Key result: expanded returns processing by 22%.

In North America, the division reduced its returns processing programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division modernised its fleet electrification programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In South Asia, the division restructured its customs digitisation programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division stabilised its cold-chain capacity programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division improved its workforce training programme, which contributed to a 14% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	276	225	1,424	98.1
Q2	250	168	2,094	89.0
Q3	445	332	663	90.2
Q4	336	298	1,489	94.8

12.2 Route Optimisation

In Oceania, the division consolidated its warehouse automation programme, which contributed to a 26% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division consolidated its warehouse automation programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division restructured its workforce training programme, which contributed to a 18% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division stabilised its supplier onboarding programme, which contributed to a 26% change in operating

efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division restructured its last-mile delivery programme, which contributed to a 7% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division consolidated its last-mile delivery programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its demand forecasting programme, which contributed to a 4% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: expanded workforce training by 20%.
- Key result: modernised returns processing by 24%.
- Key result: consolidated supplier onboarding by 17%.
- Key result: reduced last-mile delivery by 16%.

In Oceania, the division reduced its supplier onboarding programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division stabilised its warehouse automation programme, which contributed to a 28% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division accelerated its demand forecasting programme, which contributed to a 38% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division modernised its route optimisation programme, which contributed to a 10% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division expanded its last-mile delivery programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	172	128	1,183	94.2
Q2	148	125	1,118	95.8
Q3	367	315	2,011	97.3
Q4	191	171	505	97.6

12.3 Fleet Electrification

In South Asia, the division stabilised its route optimisation programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division accelerated its warehouse automation programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division restructured its cold-chain capacity programme, which contributed to a 27% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division consolidated its cold-chain capacity programme, which contributed to a 35% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division accelerated its supplier onboarding programme, which contributed to a 22% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division consolidated its customs digitisation programme, which contributed to a 37% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its cold-chain capacity programme, which contributed to a 11% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: improved customs digitisation by 19%.
- Key result: restructured returns processing by 23%.
- Key result: modernised workforce training by 6%.

- Key result: restructured route optimisation by 8%.

In Northern Europe, the division restructured its returns processing programme, which contributed to a 3% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division consolidated its demand forecasting programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its warehouse automation programme, which contributed to a 31% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Latin America, the division stabilised its cold-chain capacity programme, which contributed to a 32% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division stabilised its supplier onboarding programme, which contributed to a 16% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	149	97	809	88.5
Q2	156	131	2,336	90.0
Q3	407	334	972	93.5
Q4	465	379	1,507	96.8

12.4 Demand Forecasting

In North America, the division stabilised its fleet electrification programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division expanded its last-mile delivery programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Northern Europe, the division consolidated its last-mile delivery programme, which contributed to a 17% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Oceania, the division consolidated its cold-chain capacity programme, which contributed to a 12% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division improved its warehouse automation programme, which contributed to a 13% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Middle East, the division stabilised its returns processing programme, which contributed to a 23% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division accelerated its demand forecasting programme, which contributed to a 19% change in operating efficiency compared with the prior year while keeping service levels within agreed targets.

- Key result: restructured demand forecasting by 28%.
- Key result: stabilised fleet electrification by 27%.
- Key result: stabilised supplier onboarding by 3%.
- Key result: restructured supplier onboarding by 6%.

In Latin America, the division expanded its cold-chain capacity programme, which contributed to a 15% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In North America, the division reduced its returns processing programme, which contributed to a 30% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In East Asia, the division expanded its route optimisation programme, which contributed to a 5% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division stabilised its route optimisation programme, which contributed to a 36% change in operating efficiency compared with the prior year while keeping service levels within agreed targets. In Southern Europe, the division accelerated its demand forecasting programme, which contributed to a 34% change in

operating efficiency compared with the prior year while keeping service levels within agreed targets.

Quarter	Revenue (€m)	Costs (€m)	Shipments (k)	On-time %
Q1	298	180	2,333	97.8
Q2	167	110	1,446	97.5
Q3	426	330	662	90.2
Q4	360	245	1,230	94.4
